

Cyber Security Training

A company's staff can often be its biggest weakness when it comes to cyber security; it is estimated that 95% of successful cyber-attacks have an element of human error involved. This statistic highlights the importance of educating employees, so they understand the ever-growing threat of cyber-attacks and how best to mitigate them.

In collaboration with Protect 2020 Academy, we have developed an E-Learning platform with training modules designed to create awareness and educate our clients' employees on the cyber threats they are exposed to.

With our training your staff can develop a sound understanding of cyber risks and how to mitigate them, equipping them with up to date knowledge to enable them to remain safe, both at work and at home.

Our Cyber Security Awareness training package is split into eight modules with an assessment to test the candidate's understanding. Each module covers individual aspects of cyber security and the various cyber threats facing businesses today. The modules are interactive and engaging, with knowledge checks and training for security best practices, ensuring your staff remain your best cyber security asset.

For information on Cyber Security Training, please contact your account manager.
